CLASH OVER MICRO CLUBS

Two clubs for owners of the Oric-1 computer are set to clash — even before the new group is launched.

Now Alex Cross, who is setting up the new club, is seeking a meeting with Bob Green, who runs the Tangerine Users' Group.

Mr Cross, 46, said he had Oric Products' consent and expected to have 10,000-15,000 members by the end of the year. He is director of Wembley-based Oric dealers Micro Computers Incorporated.

TUG began three-and-a-half years ago and says 40 per cent of its 5,000 members own Orics.

Mr Cross said: "One could say that Mr Green has not got an official club, but everyone sets them up. I want to get in touch with him because obviously there's conflict here."

Could he see a clash looming?

He said: "This is one of the reasons why I'm particularly hesitant about saying what we are doing to do as a club."

"It's ethically better that we get in touch with Mr Green."

EXCLUSIVE

We don't deliberately want to have a conflict of ideas and a conflict of interests.

"I want to see if we can co-operate and if we can draw some parameters so we do not clash."

"What is clear is that there

is a grey area here and we want to resolve this before we reach the user.

"The fact that there is a confusion between Tangerine and Oric Products International is something that happened at birth. Tangerine being the designers of the Oric."

Continued on page 3

Sound of software

It looks just like any other 45rpm single and when you play the A side it sounds like one too.

But flip it over and Chris Sievey's new release is also three programs for the ZX81.

One of them displays the lyrics so fans can sing along with the A side, a pop-rock number called Camouflage.

The other two programs are 16K and 1K versions of a game called Flying Train.

And almost all of the single was put together by Chris, a 27-year-old part-time petrol pump attendant.

By using a studio's multi-track recording machine, he plays eight acoustic guitars, four electric guitars, two base guitars and a grand piano as well as singing.

The two other vocalists are his wife Paula, 28, and their

WE'VE PICKED THE BEST, FORGET THE REST! SPECTRUM/ZX81 SOFTWARE SUPERMARKET

All we do at Software Supermarket is play every Spectrum/ZX81 program we can find, pick out the very best and offer only those to our customers - in our ads and our catalogues.

From over 30 countries you write, praising our free selection service (it's impartial, too, we produce no programs ourselves). You say we save you plenty - in postage and mistakes.

And we're quick. We usually send your order out on the same day we get it. Faulty tapes, if any, replaced at once.

OUR NEW CATALOGUE IS OUT NOW Here's a few - the best of the new, the all-time greats. Free catalogue with every order. You've got a great computer, we've got the great programs.

Mail order only, please. If we had to run a shop, we wouldn't have time to run all the programs.

48K SPECTRUM ONLY

LET 'E.T.X.' TALK TO YOU The clearest speech we've ever heard in this "adventure/graphic arcade game utilizing every byte of computing power in the Spectrum" (Abbex). Enchanting graphic adventure: 16 landscapes: 1400 power zones: 4-levels: 16-page on-screen manual: up to 9 players: it's amazing what a Spectrum can do. (Abbex) £5.95

TRANSYLVANIAN TOWER "Enthralling and addictive" (PCW). An excellent game at a reasonable price" (PCN). Stunning 3D graphic adventure. Fight (and shoot) your way through the 500 3D rooms in Count Creepie's castle. Combines adventure and arcade games with great skill. We can't give it up! (R. Shepherd) £6.50.

KNOT IN 3D Brand new mind-boggler from the author of 'Escape' and 'Tunnel'. Absolutely brilliant. Untangle yourself - or get knotted. Avoid collisions: worry about the chasers as you roam through an apparently empty 3D space. But is it? Are you? (New Generation) £5.95

BLACK CRYSTAL "An excellent graphics adventure" (S. User). The massive 180K of program, 'loads' from 2 cassettes in 6 chapters. You must solve each of the 6 stages to defeat the Lords of Chaos. Real-time monster battles: 16 command keys. Instruction manual. (Carnell) £7.50

THE HOBBIT "Takes first place for quality and value for money" (S. User) "A marvellous game - should set the standard" (ZX Comp). Free 285 p illustrated book contains clues to help you. 30 beautiful full-screen pictures: 500 word vocabulary: 16 page instruction manual: it took 4 people 18 months to write! (Melbourne House) £14.95

PENETRATOR "The graphics are truly impressive... definitely in the top 5" (CVG). The most sophisticated 'SCRAMBLE' ever. Demo. Training programs. Plus amazing Customizing Mode lets you build your personal 'Scramble'. Write your own unique arcade game - without all the effort! (Melbourne House) £6.95

GREAT BRITAIN LTD "About as complex as such a program can be... excellent value for money" (Which Micro?). Choose your party and run the country. Watch what happens as the results come in on election night. Even plays Rule Britannia. (Hessel) £5.95

PIMANIA "Amusing and brilliant... the graphics are excellent" (S. User). A wonderfully witty adventure, great graphics and music and you could win the £6,000 Golden Sundial of Pi. (Automata) £10.00

ANY SPECTRUM

FROGGY The best frog there is, we reckon. This game uses so much memory, you even have to unplug your printer. Loads in 2 parts. As you get better, the game gets harder. Just great. (D.J.L.) £5.95

ARCADIA "Stunning graphics have no equal" (S. User). "In the top 3 arcade games" (ZX Comp). The most aliens you've ever met. Move in 4 directions to avoid them. Choose your own keys. Incredible. (Imagine) £5.50

INVASION FORCE Stop the invasion by blowing away the bomb ship by shooting through the force field. Suicidal game option. (Artic) £4.95

MINED OUT "It is impossible to fault... maddeningly addictive" (PCN). Just crawl across a mine field to rescue Bill. Bonuses for speed and for damsels. Watch out for walking mines. Action replay drives you crazy. (Quickstiva) £4.95

COSMIC GUERRILLA Yet another mind-bending variation on Invaders. 4 game options: 6 skill levels for each gives you 24 games in 1. Will make your wrist ache. (Crystal) £5.50

AIR TRAFFIC CONTROL If you've outgrown your flight simulator, get in charge at Heathrow. Land your planes safely. Watch out for rogues. 6 skill levels, plus demo. (Hewson) £5.95

WINGED AVENGER "Hard to beat" (CVG) "One of the best Sinclair games so far" (PCW). Very fast 'PHOENIX'. 7 play levels, 3 attack waves, laser shield: mothership with smart bombs. A best-seller. (Work Force) £4.50

3D TUNNEL "Superb graphics and game presentation" (CVG). Fly down the winding 3D tunnel, shooting bats, spiders, frogs and rats. Demo mode: 3 speeds: training program for each phase. (New Generation) £5.95

3D TANX Shoot the enemy tanks from your moving 3D turret. 3 play levels, accurate ballistics: 1 or 2 players: pause: demo game: training program: even plays God Save The Queen. (DK'ronics) £4.95

FAUST'S FOLLY The first adventure we've seen that's worth playing in 16K. It's great and it's graphic! Loads in 2 parts: clear instructions: then a smashing adventure with directions, inventory, look, score, save. (Abbex) £5.95

Continued from front page

TUG's assistant managing director Kevin Phillips, 23, said: "It's the first I've heard of it."

"He can complain until he's blue in the face but there's nothing he can do to stop us. I don't know how he's going to get on, but we've got the edge on him."

"Every day we get dozens of applications from Oric owners and it's picking up very quickly."

"I don't see why we can't get on side by side, but if he's out to take our members he's got a battle on his hands. Good luck to him, as long as he doesn't start treading on our feet."

"He's quite welcome to come for a chat, but I don't think we need to take any action. We already have the foundation. Can he provide what we are able to?"

Mr Cross said his launch date would be in June or July and that, although it would generate "a degree of revenue" for MCI, it would act independently of Oric Products in representing its members.

He planned to hire more staff and to offer membership at £5-£8 through mailing all users on Oric's list and with leaflets inside Oric packaging. There would be a news sheet, starting as a bi-monthly, and offers like inexpensive software. He was also intending to talk to Paul Kaufman, head of Tansoft and editor of a new magazine called Oric Owner.

TUG was formed by Mr Green for owners of the Microtan. Mr Green was unable to comment as he was on holiday with his wife, Vera, the group's administrative director. As well as Mr Phillips, there is a fourth staff member, Colin Nowell, who looks after software.

Mr Phillips explained how they came to include the Oric: "There are machines around but very little available for them — software, add-one and the

rest. As it came from the same stable and there was a demand we decided to include it.

"As to not being official, the only thing in which we are not official is that we are not recognised by the manufacturer — we don't carry their name. In all other respects there's nothing to complain about. We do business very fairly."

"If we think anyone has produced a load of rubbish we will say so. If you are an official group you have to be careful because it would be like cutting your own throat."

His members paid £15 a year and received a 20 to 24-page monthly newsletter, 50 per cent devoted to the Oric, which included programs to type in. Four software packages were on offer at £5.50-£6.50 with another eight to come soon.

A spokesman for Oric Products said there had been no official agreement with Mr Cross and a decision was unlikely before Oric executives returned from a business trip to America.

She said: "They've been talking, but nothing's been signed, sealed and delivered."

Apart from initial help in setting up the group, Oric did not plan to involve itself — it would be a totally independent group.

AWARI

- ★ The ancient African game of logic. It takes 2 minutes to learn the rules but far longer to master the tactics.
- ★ Select the 'Goat-herd' level of play and it's an addictive game for children (8+) that exercises their minds - not their laser fingers.
- ★ Select the 'Witch-doctor' level and it's a threat to your sanity. We haven't beaten it and we wrote it!

ADVENTURE

- ★ Over 200 places to explore in this machine code game using advanced data compression techniques.
- ★ No random elements - you will need skill, cunning and a sense of humour as you explore caves, forest and castles.
- ★ Evade ruthless pursuers and overcome a host of obstacles.
- ★ Multiple word commands and single letter abbreviations!

£1000 IN PRIZES**FANTASTIC VOYAGE
(ZX81 16K ONLY)**

This real-time graphics simulation set inside the human body was written by a lecturer in anatomy. You are injected into the blood stream in your miniature submarine. Navigate the arteries, veins and heart to the brain, where a blood clot must be destroyed. Features a real vascular map. You will be attacked by lymphocytes which must be destroyed using arcade game type graphics. Everything you do uses up precious energy. Three display formats - a lateral and frontal body scan plus blood vessel name, a close-up scan and a laser-sight for fighting lymphocytes.

- ★★ Buy both Awari and Adventure and enter the 'Foilkade Challenge' competition. Details with cassette or send SAE.

INC. P&P AND V.A.T.

'DRAGONFORTH' is an implementation of Fig-FORTH for the 'DRAGON 32' microcomputer but with a difference.

As well as the enormous power of the FORTH language, 'DRAGONFORTH' can also execute BASIC statements. This combines the superb DRAGON sound, graphics and Floating-Point commands with the tremendous speed of FORTH to produce an unparalleled hybrid. You can write a whole program in BASIC or a whole program in FORTH or any mixture of both.

If not already convinced send £2.50 for the 60-page manual (redeemable against first order).

'DRAGONFORTH' is professionally packaged, sensibly priced, guaranteed for life and will be despatched by return complete with free demonstration graphics program.

AUTHORS: Oasis Software will market high quality programs you write in 'DRAGONFORTH'. We pay a lump sum on acceptance and a generous royalty. Lets hear from you!

Chris Sievey — singing software

babysitter. 22-year-old Winifred Stack, who looks after Stirling, 4½, and 3½-year-old Asher. And a friend, Mike Doherty, plays the drums.

Chris said the idea of using the B side for programs came to him after he bought a ZX81 two months ago planning to use it to put titles on a video tape of a group called Freshies.

He said: "I used the B side because they are disposable — people are sold on the A side of a record."

In fact, he says this is his 15th single since he started recording in 1976. Just three had crept into the bottom of the top 100, including his personal best-seller, which sold 40,000, called I'm in Love with the Girl on the Manchester Virgin Megastore Check-Out Desk.

He said he was having 2,000 copies of Camouflage pressed, under his own Random Records label, to start with.

After leaving school, said Chris, he went to art college to study film making — for three days. He said: "I arrived on my first day with all my scripts and I found it was going to be 18 months before they put a camera in my hand. I couldn't wait."

Since then he reckons he has had 20 jobs, mostly sweeping up, packing, serving in shops and working as a silk screen printer.

After 14 records wasn't it time he gave up?

Chris said: "I'm not deterred. I love doing it. And I think with software on one side it has increased the chances because there are two markets. But if it flops I'll move onto the next one."

"But obviously I want to

develop it so I'm thinking of doing something for the Spectrum next."

He said that to use the single, due out on Friday at £11.15, the B side had to be loaded into the computer from a record player's headphone socket or copied onto tape and then loaded.

And he said a major distributor was interested in marketing the record.

Random Records, 3 Moorside House, Oakleigh Court, Timperley, Cheshire WA15 6UG

Same printer, different name

Oric's printer will almost certainly be the £149 Tandy colour printer/plotter with a different name on the front.

After looking at several models, Oric Products is believed to have settled on the one marketed by Tandy and made in Singapore. And the price may

well be less than Tandy charges.

The printer uses six special ballpoint pens — three black and one each of red, blue and green — at £1.69 for three, and 4½in wide plain paper, costing £3.99 for three rolls.

It will print at up to 80 characters per line.

Oric Products International, Coworth Park, London Road, Ascot, Berks SL5 7SE

The 3T27 cassette recorder

Recorder for computers

New from Ferguson is a computer-compatible cassette recorder, the 3T27, which will be on sale from this month for around £25.

It runs on batteries or mains, and features automatic recording level control, a tape counter, built-in microphone, auto-stop and pause control.

Thorn EMI Ferguson, Cambridge House, Great Cambridge Road, Enfield, Middlesex EN1 1UL

Eugene's driving ambition

Teenage programmer Eugene Evans is in line for a £6,000 company car — providing he passes his driving test.

Image Software has just bought Escort XRIs for four staff, but Eugene, just 17, will have to wait. He takes his test next month.

New general manager Bruce Everiss said that if it was not for his age Eugene, who heads Imagine's team of pro-

grammers, could have had a more expensive BMW.

Mr Everiss said: "We would buy him something a lot better, but insurance would cost a lot more. Our insurance broker said it just wasn't viable."

One of the partners in Liverpool-based Imagine, Dave Lawson, takes delivery of a Ferrari Mondial, worth around £34,000 with the extras, in August.

The other partner, Mark Butler, drives a BMW 735i Special Equipment and Mr Everiss has a Ferrari 308 GTS.

Explaining the choice of cars, Mr Everiss said: "We are a dynamic industry so we all drive dynamic cars. And we like to look after people."

Imagine Software, 28 Exchange Street East, Liverpool 2

Microfair moves to Ally Pally

Visitors to the June 4 ZX Microfair will find the conditions a lot less cramped than last time. The fair is to be held at London's Alexandra Palace — the city's third largest exhibition hall, with over twice the space of the previous site.

Organizer Mike Johnston is however hoping the extra room will be filled up with larger crowds — there were over 8,000 people at the last Microfair — and more stands.

Once again, the show will feature a computer chess tournament.

Fun and games with the TI-99/4A and others

If you own a Texas Instruments TI-99/4A and you want to have fun, I can recommend the following game to you. It is called *Henhouse*, and is available in cartridge form from Funware Inc., 405 N. Bowser Bldg. A, Richardson Texas 75081 (214) 680-8298.

When the game starts, a graphics screen displays a henhouse to the right center of the screen with several chutes. At the bottom of the screen is a farmer (you, the player).

The fun starts as the hens begin to lay eggs. If a chute fills up, you have to catch the eggs before they hit the ground and break. That is easy. Using two of the keys or the remote control unit you can get the farmer to run back and forth.

Soon the plot thickens. A wolf and a human poacher arrive on the scene at various times to eat the hens and steal eggs, respectively. You must get the farmer to the shed to pick up his trusty rifle and shoot the intruders.

Also birds are flying by which the farmer can shoot. Unfortunately, the farmer can't shoot and catch eggs at the same time, which means the gun must go back to the shed before more eggs can be caught.

If you drop six eggs or you allow the wolf to get into the henhouse, the game ends. Otherwise you accrue points for shooting birds (50 each), shooting poachers (200 each), loading an egg into the truck (20 points), and for every 5000 points you accrue you get credit for one broken egg. It really is a fun game — the first I have ever played on the TI.

It costs about \$40 over here, and I believe may be distributed through Centersoft over your way. These same people also market (or will soon) the following games: *Rabbit Trail*, in which you help the rabbit crawl through holes and collect carrots while trying to escape assorted natural enemies on seven different screens; *Ant Colony*, in which you as an exterminator, descend into the colony armed only with a spray gun (as a frustrated gardener this gives me nightmares); and *Cave Creatures*, wherein you get a laser to wipe out the creatures before they encircle or have an opportunity to multiply.

These games range in price from about \$30 to about \$43, and will all be available on the TI by the end of July.

Here's a game for you VIC-20 users. It is called *Sword of Fargoal*, comes on cassette tape, costs \$29.95, and is available from Epyx, 1043 Kies Ct., Sunnyvale CA 94086, (408) 745-0700. It requires a 16K expansion module, and uses joystick and keyboard control.

As you might guess from the title, this is an adventure game, and is apparently one of the best of its type. It creates a maze pattern of dungeons with each new game, and there are at least 20 levels of dungeons to explore. Each one is different from all the others.

Also, you are pitted against a variety of randomly generated monsters, of which the human types are the most clever. You have an assortment of potions, spells and other aids to help you out of tight spots.

The point of the whole thing is to obtain the sword of Fargoal and escape intact. No one I know has done this so far. If you like this sort of game involving complex dungeons, assorted "dragons" and have a few nights free, you will enjoy one of the best games of its type available on any machine. This one gets four stars in all respects.

The Japanese haven't been idle. Sanyo showed a 99-dollar computer quite similar to the TI-99/2, using a Z80A chip. Although three versions were shown, only two will be released here.

They are the two advanced models, the PHC and 25, both with Tiny BASIC built in. The 25 also has special function keys, graphics capabilities and a music synthesizer.

Mattel has just announced its Z80A-based *Aquarius* computer with a \$200 list price. Among other things it offers CP/M compatibility, has 8K of ROM, 4K of RAM expandable to 52K with add-on memory cartridges, a 49 key "regular" keyboard, upper and lower case, 256 character graphics, 40 x 24 display, 320 x 192 graphics resolution, and 16 colours.

Optionally available are the Logo language, as well as various program cartridges, data cassette recorder, and a 40 column printer. It is about 13 in by 6 in by 2 in and weighs a bit over 4 lbs.

It seems like a good deal offered by a company whose main income has been generated by toy sales as well as their own video game player. Not bad for the first time out.

Now for a few software announcements and game reviews. Want a decent word processor for your VIC-20 or Commodore 64? Try *Quick Brown Fox* selling for \$65 from the company of the same name, 548 Broadway, New York City, 10012, (212) 925-8290.

Submarine Commander in ROM cartridge for the Atari 400, 800 and 1200. Marketed by Thorn/EMI (I guess you might have heard of them), \$4.95. Excellent graphics, game plan, and sustained interest. Works with joystick and keyboard, requires minimum of 16K RAM. As commander of a WWII sub, you try to sink all enemy ships in the Mediterranean. Good Luck.

Escape from Vulcan's Isle, on disc for the same machines as above. Marketed by Epyx, 1043 Kies Ct., Sunnyvale CA 94086, (408) 745-0700, \$39.95. Excellent graphics and game plan, above average sustained interest. Works with joystick and keyboard, requires Atari BASIC cartridge and at least 40K. An above-average adventure game whose goal is trying to get a shipwrecked sailor off an island while avoiding various creatures such as demons, satyrs, and Med Flies (made in California, of course) who are all bent on destruction. One of the best features allows you to interrupt the game, and save it on disc for resumption later.

Video Vermin, on cartridge for VIC-20. Available from United Microwave Industries, Inc., 3503-C Temple Ave., Pomona CA 91768, (714) 594-1351, \$49.95. Minimum resident memory and joystick required. This game offers excellence in all three categories, graphics, sustained interest, and game plan. Similar in concept to the arcade game *Centipede*. As the gardener, you attempt to rid your garden of various vermin such as ants, beetles, spiders and snails. As you wipe out the vermin, mushrooms grow in their place to block your shots. One of the best VIC games so far.

Airstrike, on cassette or disc for the Atari machines, by English Software Company, P.O. Box 3185, Redondo Beach CA 90277, (213) 372-3440, \$39.95. Excellent graphics and sustained interest, above average game plan. Requires joystick and 16K. Similar to the arcade game *Scramble*, in which you pilot your rocket ship at the same time trying to shoot out and bomb out the enemy without being destroyed first. The game is being advertised as being very very difficult, and it lives up to its promise. Some of the difficulty lies in trying to press the two firing buttons while trying to navigate. It also offers formidable obstacles to fly around. An excellent effort from a new company. One of the better games available for the Atari machines.

More from Stateside next week....

Bud Izen
Fairfield, California

2,000 sales 'in one day'

Add-on makers Cheetah Marketing says it sold 2,000 32K RAM packs for the 16K Spectrum — on the day it was launched.

Designed to avoid wobble and priced at £39.95, the

company says it is the only one available and that it is fully compatible with all other Spectrum accessories.

Cheetah, which claims to beat any price, says the new RAM pack will soon be on sale in shops. Until then sales are by mail order only.

Cheetah Marketing, 359 The Strand, London WC2R 9HS

Salamander spreads its wings

Salamander Software, best known for its Dragon 32 programs, has announced that it is branching out into software for other machines. At the same time, it is bringing out a range of new programs for the Dragon — and selling them further afield.

Five of Salamander's established Dragon range — Dragon Trek, Wizard War, Grand Prix, Vulcan Noughts and Crosses and Games Compendium DI — are on sale in Boots now.

And the company is hoping that Boots will take the four new programs — Star Jammer, Salamander Graphics, Night Flight and Superskill Hangman — before too long.

On a more exotic note, Salamander's games will soon be sold in France, Italy and Israel. The original Dragon games have already been translated into Spanish.

The complete Salamander range of ten programs are all available now for the 32K Tandy Colour Computer. But the company has bought out two completely new games for the Oric-1: Trek, and a four-game

compendium, which were launched at the Midland Computer Fair last week. The games were produced in conjunction with Oric Products, and will be marketed jointly.

Salamander Software, 27 Ditchling Rise, Brighton, Sussex BN1 4QL

Now for the BBC

Well known for its Spectrum and ZX81 best sellers, Psion has produced its first two cassettes for the BBC micro.

They are Vu-Calc and Vu-file, at £14.95 each mail order, which are already available for the Spectrum.

Psion, 2 Huntsworth Mews, Gloucester Place, London NW1 6DD

Micros for all

Introducing Computers, a new book by computer journalist Malcom Peltu, is designed for anyone — from child to pensioner — who wants to know about computing, says the National Computing Centre, which is publishing it at £5.50.

National Computing Centre, Oxford Road, Manchester M1 7ED

Dark cloud over the micro market

Everyone is talking optimistically about the growth of the micro market, but an ominous cloud hangs over the scene: the continuing bad news about delayed deliveries, faulty equipment, and inadequate after-sales service.

Complaints about mail-order sales come, with maximum publicity, from the customers. As far as shop sales are concerned, the dealers' complaints are usually more discreet; but the public can't fail to notice when machines just aren't available. In either case, the news tends to get around.

The consequences in terms of loss of public confidence are all too obvious. But it's just as important to look into the reasons behind the problem.

Most potential purchasers of home micros are total novices who wouldn't know a bit from a byte. It's reasonable to conclude, then, that price will be the main factor they will consider when deciding which machine to buy, with attractive specifications coming second in importance.

The fact that expansion to a fully comprehensive system may swamp the cost of the computer itself is disregarded at this stage, even if the possibilities for expansion are part of a particular machine's attractions. Home micro owners generally learn about the need for expansion the hard way, after a period of wrestling with cassettes and fighting for possession of the family TV.

Micro companies may feel that there is no point building some of the less obvious features — such as ability to connect up a disk drive — into their machine, because novices won't appreciate their importance anyway. But less important but more obviously attractive features, such as a small increase in the number of display characters, may be included even though they bump up the price.

Behind such dubious choices lurks the suspicion that some home micro specifications are drafted by people who don't really understand the needs of the home computer user. It is fatally easy for a company to set up a basic computer system using standard components. It is just as easy to come a cropper in developing the system to a marketable form. Research on the practical aspects of the new micro may be limited by lack of capital, or the specification may even be fixed before its practicability has been demonstrated.

The best way for companies to avoid trouble is to proceed with caution, and avoid adventurous innovation in the early stages. It may appear that a brand new process will avoid the need to pay royalties on copyright material, but the saving can cost companies dear.

In my view, the basic cause of the problems now affecting micro manufacturers is an over-confident approach coupled with limited capital resources and a limited understanding of the practicalities. Many companies venturing into the low-cost micro field are newcomers to computing — though even those with existing models are not immune to mistakes (where are those microdrives, Uncle?)

While it continues to proceed in a disorganised way, the micro industry will never realise its full potential. Poor performance in one area of the market will prejudice progress in all the others.

Don Thomasson,
Systems Engineer
Harrow

Sound of the Dragon's roar

Dragons can now blow raspberries and sound like a piano, says J.C.B. (Microsystems) which has brought out a plug-in Sound Extension Module costing £34.95.

Sounds can be created either through a new BASIC command called MUSIC or by using pre-programmed effects, like explosion, gunshot, machine gun, car horn, ping and waves.

Other effects include siren, laser, falling bomb, photon torpedo, American siren, birds, cars starting, cars passing, crash, munch and raspberry.

J.C.B. says that setting up a three-note chord needs just one MUSIC command and that up to 28 separate POKES would be required to do the same without the new module.

Sound can accompany graphics without slowing down the screen display.

The module includes two eight-bit input/output ports, accessed by the new command,

which can control other devices.

J.C.B. says the manual also shows how users can program their own sound effects, useful for those with knowledge of machine code.

J.C.B. (Microsystems), 29 Southborne Road, Bournemouth BH6 5AE

Game for a bet

Five software titles for the Spectrum have been launched by Micromega at £4.95 each.

Two of them have two games on the same cassette and one also includes a version for the 16K ZX81.

The titles are Roulette, Dominoes, and Blackjack and Craps on a tape called Monte Carlo, Brainstorm, which includes Puzzler, and Spectrum and ZX81 versions of Gulpman.

Micromega, 230-236 Lavender Hill, London SW11 1LE

You could be on our pages

We welcome programs articles and tips from our readers.

PROGRAMS should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

APPLE FAMILY from Namal

INTERFACE 24 (PIA CARD)

Features:

- Output source 1mA @ 1.5v.
- 24 programmable Input/Output pins.
- Direct bit set/re-set capability.
- TTL/C Mos compatibility
- Automatic current limit of 2mA for direct LED driving.
- Various mode of operation allow for "Hand-shaking" or direct bit or byte control.

Price £29.50 + VAT

PARALLEL COMS 1 (CENTRONICS INTERFACE CARD)

Features:

- Full 8 bit Centronics Communications.
- Contains 512 bytes of on Card Rom.
- 64 bytes of on Card Ram.
- Busy, strobe and error hand-shaking support.
- Four users selectable driving options.

Price £49.50 + VAT

....Introducing the A.G.F. JOYSTICK INTERFACE II

for

sinclair ZX Spectrum 81

ABOUT OUR JOYSTICK INTERFACE

Offering in the "language of the joystick" a new, popular, original interface which has sold well. Offers superior performance. It's the fact that we have designed it for performance.

The Interface Module II has been specially designed to plug in to the rear connector of your ZX Spectrum 81. It has about 2000 transistors, 1000 diodes and 1000 capacitors. All of the components are hand-soldered on a 20-pin connector. This means that you can still use any other joystick interface module with a joystick.

The Interface Module II connects to the joystick through a 20-pin connector. It has a 20-pin connector on the back which fits into the 20-pin connector on the joystick. It will not interfere with anything else connected.

When a suitable joystick is plugged into "Play" it is checked to see if it will work. If it will not work, the joystick will be replaced by a new one. The joystick will be replaced by a new one. The joystick will be replaced by a new one.

Take a look at the list of compatible games we have listed. Which are being added all the time as a result of our contact with the various software companies.

A second joystick may be added to the "Play" position which will allow you to play a whole new generation of the latest games.

An added advantage of using our joystick interface is that it allows you to play out of the box. It is designed to be used with any of the joystick interfaces. It is designed to be used with any of the joystick interfaces.

DRAGON and Tandy Color Computer Software

MAGIC SOFTWARE MACHINE £19.95

Over 50 programmes for the total ridiculous price of just £19.95 contains Adventures, Arcade-style action games, educational, sub-routines to incorporate into your own programs, games suitable for the under-10's plus lots more.

Some of the programs contained on this compendium have been previously on sale at up to £19.95! and require 32k! Tandy CoCo Extended Basic

PACDROIDS £8.95

The ultimate in Pac-Man.

* Unlike any other 'PAC' game you've ever seen * Works on a Dragon and Tandy CoCo Computers * Super Saucer lays destructo mines * Super bomb disintegrates everything in your path * New maze every 10,000pts. * More sound, more action, more features than any 'Pac' game in existence!

Try Pacroids for the outer limit in pure, explosive arcade action!

Tandy CoCo 16k, (L1) and Extended Basic Compatible

NINJA WARRIOR £8.95

A totally awesome experience in Arcade action. You take control of your ninja and take him from a white belt, 1st Dan to Black Belt the ultimate warrior. Be prepared to overcome terrifying odds. Fires, Flaming fireball, other ninjas armed and dangerous. Over 17 levels to overcome!

Tandy CoCo 16k, (L1) and Extended Basic compatible

(Please state model (I or II) and memory size. Level 2 only)

GAMES

MONOPOLY: Let an extra player (morous or derring) join in playing the famous family game MONOPOLY. Note that the MONOPOLY game is not included with the program. Instructions included. cassette £7.95 ssd/dd min-disk £10.95 inclusive of packing, post & VAT

WHAT NEXT/MOTHS/NEW WORLD: Three games to excite, entertain or amuse you and your friends.

WHAT NEXT: Helps you predict your opponent's next move. Think about the opportunities that present.

MOTHS: We're fixing moths eat your blanket threadbare before it builds up its home!

NEW WORLD: Populates a hemisphere with new continents and islands. Each new world is different.

Instructions included. cassette £2.95 ssd/dd £6.95 min-disk £7.45. Prices include: 14 MBK post & VAT. 14 MBK post & VAT.

EDUCATION

ARITHMETIC: Inexhaustible supply of test problems. program adapts to your weak points. Set your own difficulty level. Scores displayed every ten tests. Instructions included. cassette £7.95 ssd/dd min-disk £10.95 inclusive of packing, post & VAT

SPELL-IT: Let your children learn spelling at their own pace. Build up your own question pages. Have what subjects you wish. add more whenever you like. Instructions included. cassette £7.95 ssd/dd min-disk £10.95 inclusive of packing, post & VAT

BUSINESS

QUICK-CHANGE: Price list editor. prices of single articles or whole lists changed by user chosen factors. Minimum system required. 16K level II, please state memory size for diskette system. Instructions included. cassette £9.95 ssd/dd min-disk £12.95 inclusive of packing post & VAT extra

COMMISSION-82: Calculates commission pay for those in small businesses. No statutory deductions. Instructions included. cassette £9.95 ssd/dd min-disk £12.95 inclusive of packing post & VAT extra

QUOTE-81: Business quotations, improve them, expand with consistency yet have flexible adjustment factors. Comes with a 30 line library page with built-in tasks. create others as you need. Recall-re-use list entry pages. Run 'WHAT IF' analyses, optimise quotations, maximise profits. Requires 48K, twin disk system. Program and operating instructions. Mini-diskette £79.95 plus VAT

NEWS-80: Purpose written NEWSAGENTS' retail accounting package. All practical features for 280 to 2800 accounts. BILLINGS CHANGES ROUNDS HOLDS STOPS BAD DEBTORS, etc. etc. Use in the office or at the counter. System requirements: 48K, twin ssd/dd diskettes and printer Model I or II. Program and operating instructions for version 2 (other versions available). Mini-diskette £59.95 plus VAT

OPERATING SYSTEM

MINDOS: Authorized subset of Appare's NEWDOS. This can be supplied if required to run above 40 track disk packages, model I only. Abridges instructions included. ssd/dd min-disk £15.00 price includes packing post and VAT

Get ET right

Thank you for reviewing by program ET (April 26-May 2). I would just like to make a few points that the reviewer overlooked.

The instructions program is only intended to be used once to give you the idea of the game. You have the choice of seeing the instructions or loading the main program.

The maze is twice the size of the screen so that when you move to the edge of the screen, the maze scrolls across the screen (I have not seen any other program use this method before).

As it being 'Well-nigh impossible to get hits in the fourth stage. I would agree with this on level 1, but the game has nine skill levels, and I very much doubt that the reviewer would be able to get through the Asteriod Belt stage at skill level 9.

The program also has the facility to save and reload the Hi-score and Hi-scorers name.
Nigel Stuart, Altrincham, Cheshire

My Lynx's colour bar problems

On the 27th of March I bought a Lynx at my local micro shop. I quickly caught the bus home and plugged it in. I fiddled about with it and tried loading in the demonstration programs, but they would not load.

When I pulled the cassette lead out of the back of the Lynx the protective black coating came off the socket, and I noticed that a wire was unsorted. So I rushed the Lynx back to the shop the same day and they fixed it for me.

That night, while I was using the Lynx, I noticed thin bars of purple shooting across the screen. So I took it back to the shop the next day and tried it there, but it seemed to be perfect.

I took it home and tried again. I tried two black and whites, two colour TVs, but the lines were still there. I returned to the shop the next day, where they swapped it for another Lynx.

On this one there were no bars, but no colour either — just black and white. So I took it back — by this time the assistants must

Send your letters to Letters, Home Computing Weekly, 145 Charing Cross Road, London WC2 0EE. Don't forget to name your computer — the best letter could win £5 worth of software. Queries cannot be answered on this page

have thought I was mad. No problems in the shop, so once again they gave me a new machine.

At home the computer was the same. No colour, just black and white. I tried this machine on several of my neighbours' TVs — a Sony, two Hitachis, and a Grundig, but still no colour.

So the next day I returned to the shop and got my money back. No I am looking for an Atari 800 — better luck next time, I hope!

Wayne Swift, Bradford
Riva Gould, of Computers, said: "Though there were some colour problems with the very early models of the Lynx, these have now been sorted out."

"I don't know what was causing Mr Swift's problems, but I wish he'd written to us — we're here to help, and all our dealers have a hotline to Computers to deal with queries like this."

You win some . . .

I read with interest Artic Computing's letter in issue No. 8, and noted that in issue no 1, that very bug was spotted by Ray Elder in his review of Ship of Doom.

Congratulations to Mr Elder and your magazine in being, as far as I know, the only ones to have noticed this. It gives me confidence in the standard of your reviewers, and I shall certainly take note of the future reviews you publish.
John Ellis, Bristol

. . . you lose some

I feel I must correct the great injustice done by your reviewer R.H. to Elfin Software's brilliant Tobor program for the 48K Spectrum.

It is not, as the reviewer

jumps to conclude, a Pac-Man game, but a derivative of the arcade game Berserk. His comment that "you can only fire in the direction you are moving" is not a program fault at all — it is a feature of Berserk.

I really do not understand the comment about unresponsive movement. Although I will admit that the playing keys are a little difficult to master, I found the program extremely responsive. Tobor remains one of the best programs in my collection.

I would like to add that I have no connection whatsoever with Elfin Software!

Raymond Blake, Rayleigh, Essex

Oric has lost its edge

Although I have no wish to start another BBC vs Spectrum war, so far all the reviews of the Oric-1 I have read have been convinced it will wipe the floor with the Spectrum. Not so, I myself have a 48K Spectrum, but recommended a friend to buy the Oric. After using it, he decided to take it back and get a Spectrum instead, although he gave it three chances (and exchanged it three times).

The Oric's operating system is better, especially the famous sound channels, but it is more difficult to program. There is no syntax checking, and the report codes are far more confusing than everyone has let on.

The tape lead supplied had a three-pin DIN socket on either end instead of jack plugs. No tape recorder could be found to connect to it, so we ended up rebuilding a DIN socket with jack plugs.

The Oric has no verify command, and you have the choice of two loading speeds — amazingly slow and accurate, or

amazingly fast and inaccurate. Editing is a pain. Now that Sinclair has dropped its prices, the Oric has lost the marginal (but solid) hardware lead it originally had.

A final point — the National ZX Users' Club has now been wound up, so all you ZX owners, a minute of silence; never shall they be seen again at a stand in a ZX Microfair. Everyone get out their handkerchiefs...

John Shiall, London N4

Computing by post

ZX Exchange offers opportunities to make informal postal contact with other ZX81 owners in the UK and abroad, and is especially relevant to your readers who live in rural areas, or who have no local user group.

The main objective of ZX Exchange is to promote self-help and amateur program-writing.

Members of ZX Exchange receive the periodic newsletter ZX Broadsheet. For further information, contact me at the address below.

Nick Godwin, 4 Hurkur Crescent, Eyemouth, Berwick TD14 5AP

An interesting addition

As a new 48K Spectrum owner, I've found your magazine to be most helpful and interesting.

I was particularly pleased to find a compound interest program in issue number four, and have found the following lines useful for a more serious application:

```
409 I ET n = 5
430 INPUT "for ten year period starting"
" in how m any years time", i
432 LET u = i + 10
433 CLS
452 PRINT AT 2, 0, "YEAR",
AT 2, 10; "AMOUNT"
453 PRINT AT n, 1; t; AT n,
12; a
454 LET t = 5 + 1
455 LET n = n + 1
456 IF t = u THEN GOTO 440
458 IF INKEY$ "" THEN
CLS: GOTO 460
459 GOTO 458
```

Andrew Osmond, Watford, Herts

Copyright confusion

After the recent arguments about the copying of cassettes I would like to comment on another aspect of the copyright law.

On all cassettes it states that you are not allowed to lend or re-sell the cassette without the publisher's permission.

But while reading the classified pages of many magazines it is noticeable that the computers are nearly always sold with some software. Surely the software adds to the amount of money the seller is expecting for the transaction. This is in fact selling the program which is illegal.

Since people spend up to £100 on software it seems unfair on them if they couldn't sell it in some way and without the computer this software is almost unusable to them.

But it is also unfair on the author that they do not get the chance to sell their cassettes to the buyer and they do, I would think, lose money.

The selling of software only adds to the confusion which exists in the copyright law and it's about time it's looked at again and made more clear to everybody.

G.E. Pritchard, Cardiff

Save my variables!

I wonder if any of your readers can explain to me why on such a comprehensive machine as the Lynx you cannot save variables?

I realise that you can save the programs you actually write, but this isn't a lot of use if you write a personal banking program, data base or address file where a lot of additional data needs to be saved in the form of variables.

May I say I think Lynx have misrepresented their product. I think you will agree if you read their leaflet that you are led to believe you can save programs on the Lynx just as you can on say the Spectrum or Oric.

P.E. Lawrence, Orpington, Kent

Joe Lang, of Computers, said. "The following short routine can be added to any Lynx program as a CODE line and will save variables, PROTECT levels and INK and PAPER colours

```

Fighting talk

To all those who have had problems with computer companies who don't deliver on time, here's my advice.

Persevere. Ring and ring until they get sick of the sound of your voice. If they offer or send your money back, tell them they are breaking the contract (because that's what it is). Say that if they don't pull their socks up you will issue writs against them.

It works — I've tried it. I was order number 5 with Oric International, and I waited almost five months for mine. But after sending them the draft of a letter "expressing my views", which was to go to a computer magazine, they got worried and after 2 days, there was my Oric.

My last word is don't give in, and if need be, stop all payments (if you use a credit card) until you get it. Good luck with the arguing...

R. Whitfield, Chelmsford, Essex

Out with the old in with the new

Thank you for including my cassette Venture in your last lot of cassette reviews, but unfortunately it would appear that your reviewer relied on past knowledge of a much older version of this cassette.

For well over three months

Venture cassette has replaced the Bomber game with a 'Blitz' type game. Also, the 16K & 48K versions has been replaced with a dual load version for 16K or 48K AND an additional three compulsive games are included at no extra cost.

This cassette is as advertised in my full page advert in the first issue of Home Computing Weekly and is sold as a 'value for money' cassette.

This new Venture cassette is available from several computer shops in north of England and sells reasonably well with a fair percentage being sold on 'recommendation' of friends. One major difference with Venture is that the pictures on the front of the cassette sleeve is honest in that it shows actual games.

This is unlike the majority of cassettes which are blatantly breaking the Trade Descriptions Act by showing pictures which bear no relation to the actual content. I for one am not prepared to splash pictures of space men & rocket ships on a sleeve unless game actually contains the graphic thus shown.

G.A. Bobker, G&J Bobker, Bury, Lancs

Our apologies to Mr Bobker, but our reviewer is innocent — he reviewed exactly what he was sent. Clearly one of the old versions of Venture must have turned up in the office somewhere. Still, nothing ventured, nothing gained.

A question of character

In your magazine of 12-18 April you included a character redefiner by Marc Freebury. I was most intrigued by this program and loaded it into my Atari 800.

It worked OK, except for the inversion part which only printed blanks. However, I traced the problem to lines 3030 and 3070. If the GOSUB 6200 is changed over, it works perfectly.

I hope this will be useful to others like myself. I only started this hobby in February this year, and find it very satisfying. Incidentally, I am over 60.

H.G. Woodman, Wembley, Middlesex

Fast work by TI

In these days of long delays and bad service by some companies to their customers, I would like it to be known that there is one company at least who look after their customers — namely Texas Instruments.

Last week I phoned TI to ask about loss of colour on my T199/4A. Their technician diagnosed this fault as a faulty modulator, and within four days a new modulator had arrived by Securicor Parcel Service.

What about that for service, par excellence.

W.D. Roberts, Colwyn Bay, Clwyd

TI program POWER

I just wrote to say congratulations for an excellent magazine. Having bought all six issues so far, I've found that Home Computing Weekly is worth every penny.

I myself own a T1-99/4A, and the series of graphics programming routines for this computer has given me a lot of help in my own games programming. Many thanks to David Gray who wrote the series.

Please keep up the good work — and more competitions and game reviews please!

Simon Dawson, Workington, Cumbria

Alteration alteration

I read with interest Mr Casson's "alterations" to my character generating program (Letters, issue 8). While line 2005 is indeed a print error, I think he will find that line 1030 renders his other corrections both unnecessary and inefficient.

Mr Casson has also overlooked the fact that the program is for designing characters, not changing them. The reason for this becomes all too obvious when you change characters in use on the screen, in particular ' ', which produces amusing but illegible displays.

Grant Privett, Waltham Cross, Herts

A NEW SERIES FOR FIRST TIME USERS

"Learning to Use" is a new series of books which introduces newcomers to the most widely used micros in the marketplace.

The books assume absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The books lead the reader through simple programming and then on to graphics, with several programs which show how to achieve pictures and even animation!

The user-friendly approach is consistent throughout the text – not only are program listings clearly shown, but in many cases, a photograph is included to show what the program looks like when actually loaded and run!

All books in the series are £5.95 (incl. postage).

TRANSYLVANIAN TOWER

A spectacular 3-D maze adventure for the 48K Spectrum

RICHARD SHEPHERD SOFTWARE

EVEREST ASCENT

An adventurous game of strategy and planning for the 48K Spectrum

RICHARD SHEPHERD SOFTWARE

TRANSYLVANIAN TOWER

A spine chilling adventure ... enter via the dungeons ... navigate your way through 500 3-D rooms ... survive the swooping vampire bats ... reach the terrifying top ... and rid the world of the evil Count Kreeple!

Can you survive the top of The Tower? Full save routine for use during the hours of darkness!

48K Spectrum. £6.50.

Also available by mail order

SHIP OF THE LINE

Command a sailing ship ... juggle your supplies, crew and firepower ... fearlessly battle your way up the admiralty ladder, bribe Sea Lords as necessary ... until you make First Sea Lord! Full save routine. 48K Spectrum. £6.50.

EVEREST ASCENT

Conquer the world's highest peak in defiance of all the obstacles, men and nature can throw at you ... survive avalanches ... cross bottomless crevasses ... cope with wayward Sherpas — but don't run out of supplies!

Full save routine. 48K Spectrum. £6.50.

Also available by mail order

SUPER SPY

A global spy chase through complex puzzles, coded messages and 3-D mazes. Follow Dr. Death's trail ... locate his secret island ... discover the entrance to his lair ... but it doesn't end there! A different solution every game. Full save routine. 48K Spectrum. £6.50.

ESCAPE FROM Orion BBC 32K £6.95

Quicksilver, Hope Camp, Wincobourne, Devon, PL17 7PU

This game guarantees you entertaining screens with good graphics. The astronaut looking spaceport for his ship to take his way up ladder and over gate to planet.

The controls are simple, allow you to select which launch to take out of fast missiles, life, view-er bits and elastic doom. You can also select which levels to visit etc. It is the first program I have seen that changes the colours for those with black and white sets.

The difficulty levels are very gradual, becoming beyond level 5 calls for real skill. The control keys are well placed and the joystick option offers a good responsive game. Some recommended joystick software.

The only real fault is the instructions which deviated greatly from what was intended, and the slightly strange choice of colours. Nevertheless, the price is excellent.

Can't remember...

Skyhawk VIC-20 £7.95

Quicksilver, 13 Palmerston Rd, Southampton SO1 1LL

Skyhawk is a defender-type game in which you pilot a plane and try to protect a town from enemy fighter bombers. Your plane can travel both left and right at one of three speeds, and takes off vertically.

The action takes place over a nicely-drawn town which scrolls smoothly in both directions depending on your direction of flight. The enemy aircraft attack in waves of increasing numbers from either direction, and you can see actual deployment and number of enemy on a small radar screen.

The fuel and missile supplies of your plane are limited — you must replenish them by landing on one of the available landing stages. But the enemy will try to destroy the landing points before you can get there! The aim of the game is to simply survive and destroy as many of the aliens as possible.

Overall a well-made program which uses multicolour mode and 3D effects. Animation is smooth and effective.

But control of the plane is by joystick only — a bit silly, since many VIC owners do not own joysticks.

I feel too, that the concept lacked originality. Bearing in mind the effort being made by Quicksilver to extend its cut of the market, I would like to see some brighter ideas than this.

In spite of my reservations, though, this is an addictive and difficult game which represents good value.

Damper/Glooper ZX81 £4.95

Quicksilver, 13 Palmerston Road, Southampton, SO1 1LL

I didn't find the blurb for this program very helpful in understanding the game, in spite of the writer's vivid imagination; but the game itself was better.

Damper puts you in a city on an alien planet; mysterious black blobs are attaching themselves to the power cables, moving around the grid and sapping the city's power supply. Your job is to move a grid runner around the wires, damping down the power while avoiding the aliens.

The game loaded and ran with no problems; there are optional instructions displayed at the start of the programme.

There are five 'dampers' for you to avoid; they move in an irregular wave up and down the grid, and if your timing is not precise it is very easy to get caught!

The graphics are clear and the controls are quick without being over-sensitive. You have three 'lives' (plus bonus if you become good at the game) and the speed increases as the game progresses.

Scores are displayed, and at the end of each game there is a 'hall of fame' display; the players with the highest scores may enter their names. There is also a facility for saving the game.

I found Dampers a straightforward game, without frills, but with enough difficulty involved to prevent the player from becoming bored — everytime I thought I had the knack of avoiding the 'dampers' I managed to get caught.

Glooper is a relative of Quicksilver's Munchees, fun to play and competently produced.

Bank on your micro to check on your cheques

How much is in your bank account? Don't wait for a statement, Anthony Gray's program for the TI-99/4A will tell you straight away, and help your budgetting

Keep an eye on your spending with my bank account program for the TI-99/4A. It allows the initial balance and a series of transactions to be maintained and manipulated.

Each entry consists of an amount, a date, a cheque number and some details.

The amount is entered as the number of pence — a negative number is a debit and a positive number represents a credit. Dates are entered in the form dd/mm/yy and are checked for validity.

The cheque numbers and details are arbitrary strings of up to 15 and 56 characters respectively: extra characters are discarded. This means two transactions can always fit into a record on a cassette tape.

When the program is run you are asked for the data and the following menu of options is displayed, chosen by pressing the appropriate letter:

- N set New date and/or new initial balance
- B determine the new Balance after transactions
- I Input details of an account from a cassette file
- O Output. Save details of the account on a cassette file

- A Add a new entry to the account
- C Change an existing entry
- R Remove an entry from the account
- S Sort all the entries according to their dates
- T Terminate. Quit the program

You should only need to follow the instructions on the screen, but bear in mind the following points:

An entry is specified by its item number (1, 2, 3...)

When you want to change an entry, that entry will be displayed along with another menu. Press the appropriate letter for the option you require

When asked a question with a yes or no answer press Y or y for yes and N or n for no

The program has been designed to be as robust as possible, however, there are certain errors with tapes which cannot be detected and prevented, so take care.

No attempt is made to ensure that only integer values are input as amounts or that values do not become too large. Numeric errors of this kind do not cause the program to fail, but will give wrong results.

How it works

- 100 function to convert two-character string into a number
- 110 maximum number of entries possible
- 120 arrays to hold details amounts cheque numbers and dates of entries
- 130 definition of 1 character
- 140-160 set initial values for the number of entries (COUNT) today's date and balance
- 170 get today's date
- 180 display menu
- 190-320 await input and act accordingly. Accept either upper or lower case and make noise on invalid selection
- 330-370 deal with Terminate option, but first ensure user wants to quit
- 380-440 sub routine to display menu
- 610-720 deal with New In itialise option Ask for today's date and then, if current initial balance is incorrect, get a new one
- 730-860 deal with Balance option Work out new balance by adding AMOUNTs to existing balance
- 870-1140 Input file option First ensure user does want to read a file then ensure title of file indicates correct data Read data from tape and display cheque number of each entry read
- 1150-1390 Output file option First ask user for a title for the file being written and then ensure all is well before writing the tape As each item is written to the tape, display its cheque number
- 1400-1710 Add entry option After checking there is room, input data for the new entry Display new entry and ask for confirmation that it is to be inserted Repeat if user wants to add more
- 1720-1860 Display entries option Display each entry or message to show there are none
- 1870-1960 Sub-routine to turn a number (VALUE) representing a number of pence into a string (VALUES) in sterling notation For example, 5673 is turned into 56 73 and -5673 is turned into 56 73 db
- 1970-2070 sub-routine to accept Y, y N or n as answers and return true or false on yes request date as dd mm/yy, check validity and place date into THE DATE in the form yymmdd to ensure that entries can be sorted into chronological order
- 2180-2430 sub routine to convert date back into dd mm yy and place in DATES
- 2440-2490 press space bar to continue
- 2500-2700 display entry with item number given by INDEX
- 2610-2950 Change entry option Ask for item number of entry to be changed and check it exists Then display entry and menu of options Wait for selection and perform required change By selecting Next, user can change another entry and by choosing Exit will return to main menu
- 2960-3190 Remove entry Ask for item number to be removed, ensure it exists, display entry, ask for confirmation that it has to be removed Move all subsequent entries down one place Check if user wants to remove more, return to main menu
- 3200-3400 Sort entries into chronological order

SIR COMPUTERS LTD — CARDIFF

Agents for Acorn, BBC and TORCH Computers

BBC Microcomputers

Model B	£399.00
BBC Model B with 1 2 OS	£399.00
Model B with disc interface	£509.00
Single 100K disc drive	£249.00
Dual 2 x 100K disc drive	£389.00
The disc manual and utilities disc are both included	
Disc interface for the BBC Micro	
Kit	£95.00
Fitted	£110.00
Upgrade of BBC Model A to B	£90.00

Please telephone for up to date information on Prestel, Teletext speech synthesis second processors, etc

TORCH Computers

Z 80 Disc Pack for the BBC Microcomputer £895.00

This unit connects to the BBC Micro in the same way as a normal disc drive but as well as offering a dual 2 x 400K disc drive for use under BBC BASIC or other languages it provides the option of using the wide range of CP/M software available for business and data processing applications. The firmware supplied with the machine allows switching between BASIC and CP/M, a powerful operating system developed from CP/M 2.2

In addition to the disc pack a second processor is supplied. This is a Z-80A with its own 64K RAM card, communicating with the 6502A in the BBC computer through the 'Tube'. Typically the speed of execution of programs under the twin processor system is increased by up to 50% compared with a conventional single processor computer. A third processor, the 16 bit 68000, will shortly be available.

TORCH CF240 £2795.00 (ex VAT)

This is an extension of the BBC microcomputer/Torch disc pack system, available in a single unit. The computer contains a BBC based peripheral processor connected to the main Z 80 computer, a dual 2 x 400K disc drive as described above, a high resolution (80 character) colour monitor and a complete British Telecom approved 1200 baud modem. It is the only microcomputer which has been granted permission for direct connection to the Public Switched Telephone Network both in the UK and the United States.

The TORCH can communicate either directly with another TORCH or with virtually any other type of computer via Prestel. Using the Gateway facility of Prestel it is possible for the TORCH to access vast amounts of information stored by private organisations on public database systems. The Mailbox facility of Prestel also allows the use of electronic mail.

TORCH CH240/10 As above but with a 10 MB hard disc drive

TORCH CH240/21 As above but with a 21 MB hard disc drive.

PERIPHERALS

Seikosha GP 100A Printer	£225.00
Epson MX 80 F/T type 3 Printer	£399.00
NEC PC 8023 Printer	£389.00
Kaga 12" RGB Monitor	£280.00
Sanyo 14" RGB Monitor	£270.00
High resolution 12" black/green monitor	£85.00

SOFTWARE

We currently hold in stock programs from the following suppliers: Acornsoft, ABF Software, Bug Byte, Computer Concepts, Data Base Software, Digital Fantasy, Gamma, Golem, LJK Software, Level 9 Software, Molimers, MP Software, Program Power, Salamander Software, Software for All, Superior Software.

Unfortunately, we are unable to supply software by mail except as part of a large order. Delivery by Interlink of any of the above items £10.00. Unless otherwise stated all prices include VAT.

SIR Computers Ltd., 91 Whitchurch Road, Cardiff. Telephone: (0222) 21341

NEW! NEW! NEW!

Rainbow Research
288 High Street, Ponders End,
Enfield, Middlesex, EN3 4HF, England

'CHARGE' & 'DEMO' for BBC A-B

Space does not allow full description of this program. Generate in 8 bits and 8 flashing colours your own characters. Sizes from 2, 24 bits wide x 8 pixels deep. Full cursor control as usual size of character shown. Press or Byte string needed to generate the character. Demo will show you how to save and incorporate characters into programs. Full documentation for both the programs on one tape. **£8.50**

'LANGUAGE TUTOR' for BBC A-B, SPECTRUM, ACORN ATOM & VIC 20 (unexpanded)

The ideal program for the exam spot or revision. Key in your own choice of foreign and English words. The program then presents them at random for your translation. You can save your words on tape and create your own vocabulary database. **£5.00**

'LANGUAGE DATA TAPE' (for machines as above)

A cassette in German or French. Hundreds of words pre-arranged in groups ready to load into the language tutor program. **£6.00**

'READ ARROWS' for BBC A-B

A spelling game for primary level. A string of words pass along the top of the screen. Shoot down the misspelt words with the red arrows. A fast moving game with a real educational value. **£6.00**

'ADDRESS BOOK' for 16K & 48K SPECTRUM (state which)

This is the one you have been waiting for. Ideal for personal, business and club use. Menu driven includes up to 100 characters per entry and commands like search, add, alter, display, save, erase and print. All you will ever need in a database. **£6.00**

'DATAMASTER' for VIC-20 (unexpanded)

A small but flexible database program includes a menu driven list of options like input, view, change, output, load, alpha-sort and clear. Ideal for personal and club records. **£5.50**

'THE GREAT IBERIAN CRYSTAL' for BBC A-B

Are you tired of uncompromising adventures, if so... this one is for you! A unique game which will have you spell bound. Dare you let loose wild dogs on a man eating warlord? Will the spells work for you...? **£6.00**

'SOLITAIRE' for VIC-20 (unexpanded)

This is the familiar classic you normally play with plastic pegs. Make your moves to leave the last peg standing in the middle position. Sounds easy doesn't it! Hours of family entertainment. **£5.00**

'ZAXX' for VIC-20 (unexpanded)

Shoot down the aliens with your laser, not just from one angle but from three, some good sound effects. Great fun. **£5.00**

'COBRA' for VIC-20 (unexpanded)

Just how many of the tasty morsels can the cobra eat, you can move in all four directions. Another fine game with sound, colour and some surprises. **£5.00**

Let's face it — the sound from your Dragon 32 wouldn't win any prizes at an Eisteddfod. What you need is a:-

Dragon 32

**SOUND EXTENSION
MODULE**

- Fully-cased module plugs into cartridge port
- Provides 3 channels of sound; 3-note chords and harmonies over 5 octaves
- Uses new BASIC command. No need to 'Peek' or 'Poke'
- Many built-in sound effects (e.g. bomb, laser)
- Music and graphics can occur together without loss of speed
- Based on popular, well-proven sound generator
- Two Input/Output ports included
- User manual provided, with examples

Cheque/P.O. to:-

**THE INSTITUTION OF
ANALYSTS & PROGRAMMERS**

An association which endorses the status of its members, encourages their high standards, assists their careers and promotes their interests in the essential foundation of every profession.

The Institution of Analysts & Programmers is the leading association for those engaged in systems analysis or computer programming for Commerce, Industry or Public Service. Membership of the Institution, as shown by the designatory letters Cmpn.I.A.P., F.I.A.P., M.I.A.P. and A.M.I.A.P. is widely recognised and respected. The Institution is the supervising authority for the Copyright Register whose protective legal service is available to all (members and non-members) who write original programs.

If your computer practice could make you eligible to join the Institution or if you wish to secure your right to royalties through the Copyright Register write or telephone

VIC-20 SOFTWARE

QUALITY ARCADE ACTION GAMES FOR THE UNEXPANDED VIC-20

Munch Man. Must be one of the best versions of this popular arcade game 3 lives, bonus fruit, power pills and 4 very intelligent ghosts. Price only £5:00

Scrambler. Race along the alien planets surface, bombing the fuel dumps and launching rockets, avoiding the asteroid clouds and mountain peaks. Price only £5:00

Galaxions. Shoot down the alien invaders, but beware of the swooping attackers. Price only £5:00

Asteroyds. Your ship is lost in an asteroid field, your only hope is to blast the oncoming asteroids. Price £5:00

Gun Fight. Be quick on the draw, shoot your partner before he shoots you. A game of skill for 2 players. Only £5:00

Super Breakout. The old favourite arcade game brought back to life. Knock out a full wall to gain another. Only £5.50

Cosmic Fire Birds. (8K or 16K) This must be the most spectacular arcade action game, ever to be produced on cassette for the 8 or 16K expanded VIC-20. As captain of a star ship lost in space you encounter a miraculous force of winged creatures, known to the galaxy as the Cosmic Fire Birds. They loop the loop, the figure of eight, they swoop, they dive, can you survive. Full screen display, 99 progressive levels of play, 5 lives, bonus ship at 5,000 points, swarms, bombers, leaders, hawks. Price only £9.95

All our games are written entirely in 100% machine code, superb colour graphics and sound.

Available mail order from the above address.

Also available from Micro C Manchester, B&B Computers Bolton, Micro North, Bury and soon all good computer shops.

All orders sent by return post. Trade enquiries welcome.

B.B.C. MICRO SOFTWARE

"FIRIENWOOD" £6.50 + VAT
Journey on a quest for the Golden Bird of Paradise in this adventure game. Travel through caverns and a forest in a land of Monsters and Magic where death waits around every corner.

"SURVIVOR" £6.50 + VAT
You are shipwrecked on a tropical island in this unusual adventure game. Can you survive and escape back to civilization, or will you end up in someones cooking pot. Try it if you dare! Written in Machine Code.

"SWAMP MONSTERS" £8.50 + VAT
A fantastic high speed game in Machine Code with full colour and sound. Can be played with or without joy sticks. Guide your robot through an alien swamp and try to destroy the monsters that inhabit it (Model B or 32K Model A + User Port).

"SPACEGUARD" (New) £6.50 + VAT
Your ship is trapped by aliens in this great space game. Your only chance is to destroy them whilst avoiding the mines they are laying. Can be played with or without joy sticks. Mode 2 graphics and sound (Model B or 32K Model A + User Port).

"INVADERS" £6.50 + VAT
A fast moving space game compiled in Machine Code. It utilises Mode 2 colour graphics and sound.

All programs require 32K and run on all operating systems. Disk versions now available. Ask for details. Prices include postage within U.K. Send S.A.E. for full range of programs and price list or ask your local dealer. Trade enquiries welcome.

DRAGON and TANDY software

1. DEMON Machine Code Monitor COLOR/DRAGON cartridge £18.95
A complete system for entering machine code programs, as reviewed in Popular Computing Weekly Vol2 No4 — "easy to use... a useful tool reasonably priced"

Now for Tandy Color owners as well!

2. DECODE Machine Code COLOR/DRAGON cartridge £18.40
This cartridge could save you a small fortune! DECODE converts TANDY COLOR BASIC programs to DRAGON BASIC and vice versa. Just load a TANDY tape on your DRAGON, or a DRAGON tape on your TANDY COLOR, and run DECODE to convert the program into the other BASIC. (Prove it works — convert it back again!) Now all you COLOR computer owners can take advantage of all that lovely DRAGON software!
Introductory price.

3. DASM Machine Code DRAGON cartridge £18.95
A true 6809 assembler for the DRAGON Computer. Assembly statements are entered in BASIC mode and can be interspersed with BASIC statements. Use BASIC for load and save and for editing source — simple and no time wasted learning new commands. A sophisticated product for a demanding task.

4. SPACE RACE Machine Code COLOR/DRAGON cartridge £18.95
cassette £7.95
Action packed arcade game. Chase around the track destroying hordes of aliens — watch out for the mines! Uses keyboard or Joysticks, 15 skill levels, high resolution graphics, sound. Addictive!

5. C-TREK BASIC COLOR/DRAGON cassette £7.95
Super space adventure game, graphics and sound. Destroy the Klingons before they get you. Real time operation (no time for tea!)

6. DESERT GO F BASIC COLOR DRAGON cassette £7.95
High resolution display and good sound effects.

7. POKER BASIC COLOR/DRAGON cassette £7.95
Fast action, excellent graphics and sound, machine code assisted for speed!

8. PIRATES AHOY BASIC COLOR DRAGON cassette £7.95
An adventure game. Solve the puzzles to find all the treasure — absorbing.

They laughed when he set up the company . . .

The funny thing about home micro software companies is that, despite the high-technology nature of their business, their offices are usually very low-technology indeed. Psion is an exception in actually looking like a computing company — complete with rows of programmers gazing intently at rows of screens.

For, unlike most companies in home software which employ freelance programmers working at home, all 16 of Psion's programmers work at its headquarters at 2 Huntsworth Mews, near London's Regent Park.

Dr David Potter, Psion's managing director, sees this as a vital part of creating a committed team. He said "So far, nobody has ever left Psion. It's not the money — though we pay very well according to company industry standards — but a commitment that comes from everybody being involved."

"The atmosphere's terrific. Everybody's learning, and they know they're helping to produce the best."

David Potter is clearly proud of the organisation he has set up. "I think we have development facilities second to none, we organise ourselves to be a professional, disciplined outfit. Our purpose is not just to make a fast buck and run."

Psion's development facilities include a powerful minicomputer to which all the programmers have access via terminals on their desks. This minicomputer can be instructed to behave like the ZX81, the Spectrum, the BBC, or any other microcomputer you care to name. Psion's programmers can use it to develop software for a new microcomputer before the new machine is even in their hands.

Stored in the minicomputer's memory is a library of thousands of "primitives" — machine code routines that act as the building blocks of Psion's programs. Also held in memory are a range of software "tools" that programmers can use to debug programs.

Psion software has featured prominently in the Top 20 charts of best selling programs for the Spectrum and ZX81, and its name has been linked with Sinclair Research. Candice Goodwin talked to managing director Dr David Potter and learned the secrets of Psion's success

As well as the development facility in London, Psion has a factory in Telford which deals with all its tape duplicating and production.

But less well-equipped software companies can take heart from the fact that, in terms of the home software market, Psion has been in business for a long time — a whole two and half years, in fact.

It was set up by David Potter who, until then, had been an academic, lecturing in maths and physics at the University of California, then Imperial College, London.

He decided to make the break with academic life because "I could see what was going on in the microcomputer field, and I felt that rather than talk about it, I should get my hands dirty."

He had saved up "a modest amount", and mortgaged his house to raise the rest of the money he needed to finance the venture. Now he says "It was a very speculative thing to have done. I wasn't worried about the money. The difficult thing was to throw up a whole academic career. My colleagues thought I was completely bananas."

Psion is really three separate companies, one dealing with software, one with hardware and software distribution abroad, and one with hardware development. For the first year, David concentrated on the distribution side, selling sma-

computers in South Africa, where he was born, as well as Zimbabwe, Botswana, Namibia and Lesotho.

Among the machines he was selling was the ZX80, and he became aware of a huge gap in the market for good software for this machine. "The original programs Sinclair put out were nonsense."

He started out by distributing software from other companies, including Microgen, around the world. Then in September 1981, joined by his "right hand man" and former Imperial College colleague Dr Charles Davies, he started developing programs under the Psion label.

Dr David Potter

Dr Charles Davies

PROFILE

The first programs, including Backgammon for the ZX81 and some Acorn Atom programs, appeared at the beginning of 1982. Now Psion programs feature prominently among the best selling software for the ZX81 and Spectrum, and Psion is one of the few companies to have developed a close working relationship with Sinclair Research.

David said: "We made an agreement with Sinclair to produce high-quality software for the 81 under the Sinclair label. It was announced at the same time the Spectrum was launched, to reassure ZX81 owners that the ZX81 would be supported fully in parallel with the Spectrum.

"We were aware that the Spectrum was coming, and worked with Sinclair to produce Horizons and a wide range of Spectrum software. We dropped everything to get Horizons ready by July".

David sees Horizons as a good example of his aim with software in general — "to open up the eyes of the user to the possibilities of the machine". One side of the tape introduces the Spectrum and its functions, and the other contains a series of games which each show off one aspect of the machine.

Another program he particularly likes is Flight Simulation, currently riding high in the Spectrum software charts. His enthusiasm was shared by one satisfied customer in particular — an RAF squadron leader who wrote in to say how much he had enjoyed playing with the program.

Flight Simulation shares a lot of programming techniques with VU-3D, another best-seller. VU-3D is the first program to allow users to produce three-dimensional models of solid objects, complete with realistic shading, on the Spectrum. It took several programmers five and half months to complete — the equivalent of one programmer working for two and half years — and uses the same principles that are applied in solid modelling systems for much larger computers.

Another Spectrum first to hit the market soon is a version of Scrabble, to which programmers were putting the finishing touches when I visited. The program will have a vocabulary of thousands of words, and is for

Psion's programmers all work in-house

up to four players — which includes any combination of human and computerised opponents. If you so desire, you can watch four computer opponents play each other, all on different levels of play.

Most of Psion's 16 programmers have computer science or math degrees, and three have PhDs. The odd one out is Stephen Kelly, who is now just 20, and left school at 16 with few qualifications.

He had to leave a job in Curry's warehouse after hurting his back, and was unemployed for two years. Or perhaps unemployed is the wrong word, since he kept himself busy by getting hold of a ZX81 and learning to program in machine code from scratch.

The two programs he sent in to Psion impressed David, and when Stephen phoned in response to one of Psion's ads for programmers, David invited him to London for an interview. He's been with the company ever since. David says of him "It's amazing to watch him. He's a kind of genius in his own way".

Psion doesn't use any freelance programmers. "We like to concentrate on developing in-house, because we think we can come up with more original ideas that way. Secondly I think the discipline of working in teams is important. We have three or four people working on a project at a time, a pro-

ject leader and three more junior people".

With a turnover "substantially over 16 million", Psion must be doing something right. "By the ton, we sell more software than anyone", said David.

"We shipped six tons last Friday".

As head of a booming software business, does he ever regret leaving the academic world? He said: "Not remotely. I've never had so much fun in my life".

AXIS SOFTWARE

QUALITY SPECTRUM & ZX81 GAMES

Spectrum **LABYRINTH** for 16K

The 3-D maze challenge game for all ages. Thousands of random mazes to give hours of fun. You select maze size. Walls and passages appear in full 3-D effect. Super colour and sound effects. Lost? don't panic, help is available. Best score kept - can you beat 1000! Don't miss the full action replay - re-live every step. Same maze option. Fast m/c code moves. only **£3.95**

Spectrum **SUPERBALL** for 16K

Beware of lesser versions... this game gives you 3 versions of the popular breakout type challenge to test both beginner and expert players. Can you unlock the side balls and control up to 3 balls in play at once! Very fast m/c code action with super colour display. 1 or 2 players. Various ball speeds. only **£4.95**

AND FOR THE **ZX81** 16K & 1K

- 16K **LABYRINTH** - best selling predecessor to above
- 16K **BREAKOUT 3** - 3 games in 1, speed and bat options
- 16K **MILLEPEDI & ROAD RUNNER** - 2 arcade action games
- 16K **CLASSIC 3** - Hangman (450 words), Code-break, Pairs game
- 1K **BUMPER 7** - 7K games pack of 7 games. Each Cassette **£4.95**

Cheques/PO to: **AXIS (U.K.) LTD.**, Dept. HCW1, 71 Brookfield Avenue, Loughborough, Leics. LE11 3LN. Also available from leading computer stores.

AXIS SOFTWARE

MOON STRIKE

FOR THE 48K SPECTRUM

Accurate Alien bombing from all angles. No chance to sit back, they know you have only three lives!

- * 100% Machine Code.
- * Brilliant colour Graphics and sound.
- * Up to 750 moving Graphics on screen at any one time.
- * Bonus Laser - high score facility.

All this for just **£5.95 inc. VAT.**

Also available for the **ZX81**, 3 and 5-Program 1k-16k Megapacs.

1k - 3-play just **£4.25 inc. VAT.**

16k - 5-play just **£5.25 inc. VAT.**

Can you crack the code before time runs out?

Your help is needed to decode secret cyphers from our agents, now MI5's computer can't cope. Ray Elder sets the task

You are in charge of MI5's cypher decoding computer, represented by your ZX81, with a 16K RAM pack, or Spectrum.

The messages which are fed into the computer from agents are words split into two three-letter parts and the order of each part — the number combination — will mean different things to your boss.

Variables

QW	array holds 16 random words
AS	array holds 16 word halves in random order
NS	array of 32 spaces used to write code text
G	counter for number of guesses
Y	variable used to hold value of random numbers used to determine print positions
A#	word parts
L#	flag to indicate reversal of input checks

Unfortunately the computer is malfunctioning. Instead of showing a steady display of word parts 1 to 16, it flashes each word up at random.

Time is also running out, so you can only have 16 attempts.

Can you match up the number of the two parts of each word ... or is it the end of civilisation as we know it?

Increase or decrease the number 16 in line 690 to make the game easier or harder

How it works

10-30 dimension two string arrays to hold 16 three letter words; set up set up array of 32 spaces; set counter G for guesses to zero

40-190 store 16 pairs of eight words in QW(1:8)

200-230 clear screen; print message while word parts transferred to AS(1:6); set up loop of 16 passes

240-300 give Y random value of 1-16; if Y has had that value back to 240; if not transfer QW(1) next 1; clear screen

310-340 print numbers 1-4, 5-8, 9-12 and 13-16 across screen

400-430 print "key press" message 15 lines down; give Y random number 1-16; check number previously correct matches; and if so GOTO 401; AS(L) set to three spaces when correct match has been made; times RND(810) duplicate value of Y in S

440-450 reduce value of S to less than 5 to position word horizontally

455-460 form random position word; exact horizontal and exact vertical formed by L# and G#

470 print word part 1 - 16 down S; stars across

480-490 delay loop is optional; when key pressed, increase decrease G value or aster display time

500-640 print request for number at row S; get input (A#); wipe first input; message print request for second input at row 17; wipe second input

650-700 a locate to CS both chosen word parts as single word loop; 1-16 in steps of two, compare CS with correct word part combinations; if match found GOSUB to 'correct' routine; next (check); check flag; if match not found K=0, so GOSUB to 'wrong' routine; increase guesses counter by one; check allowed number of res; if all used GOTO lose routine; return to word part routine

800-810 clear the two random word part scores so they are not reprinted

830-860 print correct message at row 16; set 'game complete' flag (L) to 0; set up 1-16 loop; check each array AS(L) — if any contain a word set flag L to 1; next array; check wipe 'correct' message

870-890 check L flag; if zero all word parts have been correctly matched so jump to 'win' routine; set K correct guess; flag to 1; return to main program

900-910 print wrong message; jump to 835 to use existing code as we say and return; if save re-writing wipe; return etc

1000-1170 clear screen; print 'lose' messages; jump to 1050 for replay option; clear screen; print 'win' messages; print replay option messages; if no key pressed keep checking by going back to 1160; if key pressed RND program

FEELING ADVENTUROUS?

ASP Software Adventure Series 1

THE WHITE BARROWS Program approximately 8K

Somewhere amid this maze of burial chambers lurks an Evil Sorcerer whom you need to trap. Trouble is, he's protected by Trolls, Dwarves, Serpents and the occasional Dragon or two! Your magic staff will block the tunnel to prevent him escaping unless, that is, he outwits you.

A real brain twister, White Barrows requires both brains and brawn from its players. It's no good just hacking your way through the Barrows and hoping to fall over the Sorcerer. Eventually you'll meet a Dragon, and they don't hack easily! You'll need all your strength and cunning to survive this one for long.

THE WHITE BARROWS Only £6.50 all inclusive!

CONQUERING EVEREST Program approximately 11K

You are in charge of an expedition comprising 18 climbers, 34 Sherpas and 40 Porters. There is food, tents and equipment for all, even the oxygen you'll need as you near the summit. One slight problem, it's all at the BOTTOM of the mountain and you have to get it all up to the TOP!

The monsters of this game are avalanches, starvation, storms and, worst of all, bad planning! A real, thinking man's adventure, Everest will test your skills of forward planning to the limit.

CONQUERING EVEREST Only £6.50 all inclusive!

**** SPECIAL DEAL **** Both programs on one tape for only £11.45 all inclusive!

ASP Software Adventure Series 2

CELLS AND SERPENTS Program approximately 11K

More monsters than you ever thought could live behind your keyboard. Wander the hills in search of gold and glory but be very, very careful where you tread! There are things here that will make your wildest nightmares look like Julie Andrews. Fancy meeting a Mind Flyer, for example? Or how about shaking hands with an Asmodeus? (You'll only do that once.) Treasure is here to be found though...the hard way.

See just how good you really are at adventuring with this practically unsurvivable fantasy. Not for the faint of heart or the slow of sword.

CELLS AND SERPENTS Only £6.50 all inclusive!

STOCKMARKET Program approximately 11K

There are other ways of making money than bashing Trolls on the head. Try this one for a change. Contend with a fluctuating economy, tax investigations, bullish opponents, impatient bank managers and consortium takeovers as you struggle to make your first million.

It is decidedly difficult and definitely compulsive. A must for all those aspiring financial wizards, both young and old, the game has real family appeal as up to six people can play. It's easy to learn but very, very hard to win!

STOCKMARKET Only £6.50 all inclusive!

**** SPECIAL DEAL **** Both programs on one tape for only £11.45 all inclusive!

Our Adventure Series programs are available on tape for the following systems.

Commodore V.C. 20 (not available for White Barrows/ Everest) Sharp MZ-80A and MZ-80K Tandy TRS-80 Model I BBC Model B or 32K Model A, Atari 400 and 800, Sinclair 48K ZX Spectrum.

Please indicate your selection in the coupon and give the relevant system. Please note that we CANNOT supply mixed orders on the combined tapes, A BBC Cells and Serpents with an Atari Stockmarket, for example.

Fill in the coupon, cut it out and send it to:

ASP Software, ASP Ltd, 145 Charing Cross Road, London WC2H 0EE

Find that program with an index

Searching through a cassette of short programs to find the one you want can be a real nuisance, unless your recorder has a tape counter — and most of the lower-priced models haven't. To add to your problems, you may have forgotten what is on the cassette anyway

My index program for the BBC micro, if SAVED at the beginning of your cassette, will tell you just what the cassette is holding — plus any other comments that you wish to record. It also lets you locate the right program without the need for a tape counter.

It does this by using the BBC's built-in time clock to control the cassette recorder, switched to Fast Forward, and wind it on automatically to the right place on the tape.

As well as programs, the program could be used to index names and addresses, subscriptions, housekeeping and so on. The procedures that it is made up of can be used separately, by merging them into your own programs for data selection and tabulation. The digital count-down clock could be used in lab work, testing or games programs

The procedures are listed in lines 40-130, using Mode 7 colour. The listing has already been compressed to take up

Having trouble remembering just where you saved a certain program? Walter Reed's program will come to your

RESCUE

only 2K of RAM, but further memory savings could be made by taking out the REMs and colour characters, and using shorter PROC names.

To set up the index times, the easiest method is to enter dummy DATA statements with time intervals of 10 to 20

seconds in column 3 of the array. Bear in mind that the tape is gradually moving faster towards the end of the cassette, and while experimenting use *CAT: instead of CHAIN in line 130.

The screen display allows for 21 items (L%) in the list, which should be enough for a C60 cassette. It may be helpful to add the index program at the full end of the cassette and use fast rewind times in the last column of the DATA statements.

You may want to keep the program in memory for continuous use. Providing the program to be selected does not take up too much memory, then PAGE boundary may be reset to PAGE = TOP + &100 before CHAINing the new program.

The index can be redisplayed and a further selection obtained simply by returning PAGE = &E00 and RUN.

QUEST

FOR ANY SPECTRUM

SIMPLY THE BEST

THE BLACK HOLE

THE SCENE: Alien spacecraft are using hyperspace drive to enter our universe through a black hole. Their intent is destruction.

YOUR MISSION: To uphold the defence of your universe as long as possible while inflicting the maximum damage on alien forces.

YOUR WEAPONS: Positive and Negative Ion Guns are deadly at any range but the ion stream is bent by the massive gravitational field of the black hole. The Neutron Blaster is equally deadly but has only limited range.

YOUR BATTLE: You are under constant attack from the alien force which pits fiendish offence craft against you in ever increasing intensity, in deadlier and deadlier form.

How long can your fleet of ships survive? How many enemy craft can you destroy?

100% super efficient machine code allows all this action to be packed in to run on the 16K (or 48K) Spectrum. Superb animation, high resolution graphics, incredible explosive and full sound effects combine to make "Black Hole" set a new standard in Spectrum software.

Also features a special learning mode to help develop your skills.

Embedded in the software is our unique score validator which enables us to introduce a new dimension to computer games. The top ten scorers in each calendar month from April through September will receive a "I'm a Black Hole addict" T-shirt and the chance to compete for prizes to the value of £500 in a championship to be held at the end of the year. We will then publish a list of the top 1000 scorers so you can find out just how good you are.

HOW GOOD ARE YOU? Take up the "BLACK HOLE" challenge NOW and find out. Send £5.50 to QUEST, 119 THE PROMENADE, CHELTENHAM, GLOS GL50 1NW to receive your copy of "BLACK HOLE" by return first class post together with a membership number entitling you to discount on our forthcoming blockbusting software.

**Trade enquiries welcome
excellent terms available**

A NEW DIMENSION IN SPECTRUM SOFTWARE

Soft Joe's

Software

Sniper – for the Dragon 32

Are you fast? ... are you good? ... can you shoot straight? ... Here's your chance to prove it. Not just another shoot 'em up game, but the ultimate in hit 'em fast, and hit 'em hard games – but this is no game ... your life is at stake!

Fast action machine code game, which calls for a steady trigger, and nerves of steel. 10 levels of difficulty, joystick controlled gunsight, high res graphics and sound. "Smart" targets!!

Game design and dragonware: R. Lowry

Cosmic Defender – for the BBC model B

"I thought I could do it ... now I'm not so sure, 'Hang on to 'em at all costs' were the orders from star command, it could cost me more than I bargained for! Even with the best star fighter in the galaxy!! I've got to hang on ... keep going ... must fight ... but for how long?..."

Defend the federation Plasmaton fuel dumps from the mindless suicide pilots of the alien battlefleet. Use your cosmic starfighters weaponry and hyperspace to destroy the evil enemy ... but watch your fuel, bonus points and fuel cost blood!!! How long can YOU hold out in this fast action game by Anthony Rafferty.

THE MISSING LINK

Acnean Mutoids – for the BBC model B

"Where am I?.. A reasonable question, but the shock answer is only the first in a series of catastrophes that might lie ahead ... A bolt of lightning stabs your eyes as the monitor awakes you from stasi-sleep, only to tell you the worst!

Your interstellar cruiser has been invaded by the evil race known as the acneans – even worse, you are alone!!

In a micro-instant you realise the task that faces you is one of spine-tingling terror – you must risk all to save earth from a horrific destiny. Can you avoid the blood dripping, plasma curdling mutoids and activate the ship's self destruct computer – do you have the courage? Can you save mother earth??, can you save yourself??? the answer is surely ... how??? Superlative graphics and sound make this game by Phil Woodrow, the ultimate challenge!

All of these superb games £6.50 each, inc first class post, packing and VAT.

All orders despatched within 24 hrs of receipt

Available from all good software outlets or direct from Soft Joe's.

Dealership enquiries to:

Coming soon – games for VIC 20, Commodore 64, ORIC,
Spectrum and Atari. (Ref HCW)

Bandit – for the Dragon 32

Ruthless ... that's the only way to describe it, try your luck against the meanest fruit machine in the universe. 1,000 credits and you break the bank. It's not easy, but then, you wouldn't expect it to be would you???

You can almost feel your pocket getting lighter in this full feature fruit machine game. Based on a real 20 symbol per reel machine, this superb simulation displays excellent high res colour graphics and realistic sound random hold and nudge facilities, with the meanest, most vicious gamble feature in the west! without doubt, the most compulsive addictive fruit machine on the market. Specifically for people with deep pockets and money to burn.

Our panel look at new games, at a range of prices, for the VIC-20. This is what they think of them...

GAME FOR ACTION—WITH YOUR VIC-20

Laser Zone
VIC-20 plus 8K
£6

Llamasoft, 49 Mount Pleasant, Tadley, Hants RG26 6BN

The aliens have landed, they're marching to get you - what can you do? Bludgen them with an Electro, or swing your Plasma Cannon with speed and finesse and pick them off. Give me the bludgen any day, but supplies of Electros are severely limited . . .

"Your objective: simply to vaponse as many nasties as you can before you are yourself rendered into your component atoms", says author Jeff Minter about his latest offering. Straightforward enough, considering you control two spaceships armed with those Plasma Cannons

Snag is, the aliens that evade your crossfire to reach the tracks on which the ships manoeuvre are

then out of your normal fire-field. You must either turn a ship to fire diagonally or hope there's just one more Electro up the tube

All of which makes this fast, innovative game a pretty tough test of coordination skills, and while good fun for all, it will perhaps be most appreciated by those who take their games seriously

Sound is effective, graphics attractive and clear (even in monochrome). I encountered no bugs or loading difficulties. The program has plenty of features, 31 skill levels (plus training mode), and comes with particularly full instructions — which you need. You also need a good joystick and, like the advert say, dedication! M.P.

instructions	90%
playability	70%
graphics	80%
value for money	90%

Scramble
£7.95

Sumlock, Royal London House, 198 Deansgate, Manchester M3 3NE

In the fast-moving machine-code game, you must fly your fighter/bombers into an enemy underground silo and destroy weaponry and stores. Control is via keyboard or joystick.

Missiles are sent up in attack, but you are armed with a forward-firing cannon and also have a bomb load to use. Low level attack is recommended so as to shoot ground reserves and to accurately place the bombs (dispersed with the space bar). Hitting an enemy missile is

worth 50 points (20 if it is still on the ground), fuel base — 100 and moon bases are worth between 100-300. A further 10 points are added for each mile you penetrate the silo.

The graphics, colour and instructions are excellent, but the sound effects are spoilt by a monotonous fanfare. Two further gripe are that it takes two keyboard entries (F1 and C) to restart the game, and there is no high score record kept.

But overall, a first-rate version of a popular game V.R.

VIC-20 Games Pack
£5.95

Melbourne House, 131 Trafalgar Road, Greenwich, London SE10

This cassette bears the legend "Five great games for the standard VIC 20". While I would go along with the claim that the tape contains five games which all fit a standard VIC, I cannot agree that they are all "great"

The five are standard implementations of well known arcade favourites: Invaders, Ground Attack, Storm, Alien Blitz (Galaxians) and Space Rocks (Asteroids). All instructions for play are contained on the cassette inlay and include a short scenario of each program. In some cases this turned out to be more exciting than the games themselves.

Space Rocks and Alien Blitz stand out as being the most effective

games on the cassette. Unlike the other games, they are written in machine code and therefore can almost match the complexity and speed of the originals. The other games were mainly Basic programs which were, to my mind, far too slow to be interesting, and rapidly became boring to play.

The author of these games obviously has a lot of talent when working in machine code, and if all of the games had been written to the same standard as Space Rocks this review would have been quite different. Since they weren't, I cannot honestly recommend this package. M.B.

Pharaoh's Tomb
VIC-20 plus
16K
£6

Anirog, 26 Balcombe Gardens, Horley, Surrey

This is a purely graphical adventure, in which you use the keyboard to control a little man who searches a pyramid for various objects.

His quest takes him into a series of maze-type screens in which are various nasties who delight in sapping his strength. Instant death also lurks in the form of different traps.

Many adventures are criticised for the use of text only. I must criticise this game for the converse — the only time text is used is when your death is announced. I would have liked to have seen simple messages telling you what the objects were and what they could do for you. Secondly, whereas in most adventures you can anticipate a hazard and sometimes avoid it, in Pharaoh's Tomb you are liable to be bumped off at any time. Instant death without warning is so frustrating — especially when you have a long game to reload.

Very good multicolour mode graphics, but overall a rather frustrating and unsatisfying game.

	A.W.
instructions	50%
playability	60%
graphics	75%
value for money	60%

The Wizard and the Princess
£5.95

Melbourne House, Glebe Cottage, Glebe House, Station Road, Cheddington, Beds LU7 7NA

"... This program will show you the extent of the possibilities for the VIC 20, both in terms of graphics and in terms of going beyond the memory limitations of the standard machine..." Thus begin the notes accompanying this five-part "adventure". Fortunately the program itself is better written

In chapter one you wander slowly through some pretty countryside, looking for the wizard's castle. It is rather hard not to find it, and success is rewarded with a "Press shift run-stop" message; on doing so you are propelled into chapter two. Here you are expected to stab a particularly handsome dragon in the throat, and unpleasantly easy it is too

Chapter three is something else again; a three dimensional maze of great complexity and size. The program note suggests that you draw a map as the labyrinth is explored, and a good idea this is. The maze is very difficult to solve even so, but enjoyable all the while.

Chapter four lapses into mediocrity with a hunt for a blob (or "monster", as the program has it) in various rooms of the wizard's castle, and the program goes out on a low note with a very uninspired "poke the troll in the midriff" game.

Good use of program-defined graphics is not enough! Only the 20 x 20 maze redeems this adventure, but redeem it it does. Melbourne House is clearly aware of the great marketing potential of adventure games at present, but competition is stiff and standards high. Higher than this.

instructions	95%
playability	70%
graphics	70%
value for money	40%

Starship Escape
VIC-20 plus
16K
£9.95

Sumlock, Royal London House, 198 Deansgate, Manchester M3 3NE

This game is a hybrid — a graphical adventure which requires the fast reactions associated with arcade games.

You are the pilot of a space ship which has been captured by an alien craft. Your ship has been dismantled and the pieces

distributed throughout the alien ship. Using either joystick or keyboard, you must wander through the ship, find the pieces, collect them in the air lock and reassemble them.

There are a number of nasties including androids, robots and space spiders in the rooms, all which are determined to stop you succeeding. As you enter each room you are given an aerial view and must either avoid the enemy using cunning or shoot it with your laser. Not all enemies, however, can be shot.

The search starts at the air lock and you are returned there if you are captured by one of the opposition. K9, the robot dog of Dr WHO fame, will help you in your task.

The game uses good graphics and is fast and frantic. A high degree of agility and good tactics are required to avoid the enemy. On the whole an excellent game which should appeal to most age groups.

	A.W.
instructions	90%
playability	90%

value for money	80%

Crazy Kong
VIC-20 plus
16K
£6.00

Anirog, 26 Balcombe Gardens, Horley, Surrey

Since the arcade version of this game is one of my favourites, I reviewed this tape with interest. I was not disappointed

In case you haven't played the arcade game, it works like this: You take the role of a small man trying to rescue a kidnapped maiden from the giant gorilla

The gorilla is lurking at the top of a series of platforms linked by ladders, and your man must try to get to the top

He also has to avoid being crushed by barrels rolled down the platforms by the gorilla, or smash them using small mallets he picks up on the way. He can also win extra points by collecting baskets or umbrellas as he goes.

This is a faithful copy of the original and, bearing in mind the limitations of the VIC, uses excellent multicolour graphics.

If you reach the top of the screen, a new configuration of platforms is drawn. Screen three included an elevator which, due to a bug or my ineptitude, I'm not sure which, I was unable to mount. So beyond this screen, I can't comment

Animation is smooth and fast with either joystick or keyboard control. A standard hall of fame is available for high scores

RFMSOFT
18 GEORGE STREET, BRIGHTON BN2 1RH

Rats, spiders, ghosts and androids — the latest Spectrum releases

Caterpillar £5.95

CDS Systems, 10 Westfield Close, Tickhill, Doncaster, South Yorks. DN11 9LA

A blue spider, a green flea, a red scorpion and a purple caterpillar are your main foes in this game. Try to destroy the caterpillar a segment at a time as it descends on you through a field of mushrooms. If it touches your gun, you are dead.

Each time the caterpillar touches a mushroom it moves one stage lower — and if the mushroom is red, it drops straight to the bottom of the screen.

While all this is going on, a yoyo-esque spider is doing its utmost to bounce on you, while clearing the mushrooms from the bottom of the screen. If it succeeds, the flea comes hurtling down, leaving a trail of mushrooms behind it.

Points are scored for destroying anything on the screen except yourself in this highly complicated arcade game — which could be highly enjoyable too, were it not for the limitations of the Spectrum keyboard.

A joystick is a must for a game like this, but the program doesn't provide for one. Matters aren't improved by the keys chosen for control. With one hand on the cursor keys and the other on the bottom row for firing, you could tie yourself in knots once the action heats up. A good game, let down by its hardware.

N.W.

instructions	85%
playability	65%
graphics	90%
value for money	75%

You face a fearsome set of foes in these new games, on sale now for your Spectrum. Our reviewers return from the fray to hand over their star ratings

Cyber Rats £5.95

Silversoft, 20 Orange Street, London WC2H 7ED

In this derivative of our old friend Centipede, deadly rats advance on you from the top of the screen. If they touch you, you lose a life (you have three to start with).

The rats appear at the top right and top left of the screen, and travel across until they reach the other side or encounter a tuft of grass. At this point they jump down to the row below.

You can move left, right, up and down, and fire at the rats as they advance (you use the 0 key for this, a point the instructions fail to mention). If you manage to clear them all, a larger swarm appears..

Every now and then an easily

avoidable purple killer rat drops down to add variety.

No problems loading, and you can play either from the keyboard or from an AGF or Kempson joystick. One or two players can take part, each player's turn ending when he/she loses a life. The highest score is recorded, but not the player's name.

Reasonably interesting, but unmemorable graphics, and lacking the addictive qualities that have made similar games so successful. Disappointing for the price.

instructions	50%
playability	75%
graphics	50%
value for money	60%

Muncher £5.95

Silversoft, 20 Orange Street, London WC2H 7ED

Another Pacman-type game in which you try to avoid four ghosts by running round a maze. The only unusual feature in this otherwise standard version is that the maze pattern varies each time it is drawn.

Each time you clear the energy dots and redraw the maze, you and the ghosts speed up. A bonus fruit materialises from time to time in the centre of the maze — munch it if you can, the extra points are worth the trouble!

The program loaded every time and the difficulty levels progress smoothly, so that even a newcomer to the game can get

some feeling of achievement. A high score is recorded, but not the name of the high-scoring player.

Muncher is let down by its instructions, which give the wrong control keys: S starts a new game, not 5, and M, not N, moves you down.

Fair graphics, especially considering how small the ghosts etc are. An addictive game, and a good introduction to the "race, chase and gobble" brigade. But with so many similar games on the market, I would have liked to see more variety and imagination.

instructions	50%
playability	85%
graphics	65%
value for money	75%

Orbiter £5.95

Silversoft, 20 Orange Street, London WC2H 7ED

Immediately recognisable as a version of the popular Defender arcade game, Orbiter incorporates many of the features of the original, such as Landers, Mutants, and the small scale display of the overall battle area.

Since these features are not mentioned in the brief instructions, it was only after consultation with a confirmed Defender fan that the full scope of the game was understood.

It then emerged as quite entertaining, if slightly frustrating game, notably in the fact that the score message kept changing colour, and in some colours was quite unreadable.

The Defender fan remarked that it was difficult, if not impossible, to position the defending ship so that attacks from the rear could be detected in time to take evasive action, but that could be seen as part of the fun.

The program loaded without difficulty, though the instruction to CLEAR 25102 before loading was a little surprising, not being needed with other machine code programs. Seven control functions were available, each controllable by a separate group of keys in the keyboard matrix.

Basically a good game, which would nevertheless benefit from slight revisions and an adequate explanation.

Let your Dragon loose with depth charges

Subchase puts you in charge of a ship with a mission to hunt submarines and destroy them with depth charges.

The left and right cursor keys control the ship's movement and the @ key drops the depth charges.

You are armed with 10 depth charges and if you drop one and miss that depth charge is, of course, lost. But if you hit the sub your charge is replaced.

And there's a bonus of two extra depth charges once you've destroyed 10 submarines.

To make the game more interesting, every time you hit a sub it randomly changes speed.

Unlike many games of this type, when you drop a charge the sub and ship movement isn't halted — it does slow slightly — so this has to be taken into account while playing.

Entering the listing should not cause many problems. The introduction and end texts may need altered spacing so you don't have half a word on one line and the rest on the line below. These sections are lines 40-60 and 850-920.

Instructions appear when

Not enough Dragon 32 programs are being published, said Ian Sellman. So he sent in his own simple Subchase game

you run the program and pressing a key shows which keys to use. This information remains on the screen for about eight seconds while the high-resolution screen is set up

When this appears you see the sub moving at the bottom of the ocean. The ship doesn't appear until you move it, then it shows randomly on the surface.

The game ends when you run out of depth charges and there's a comment on your score. Average is 10-20 subs sunk.

I've only twice reached this

score, but I haven't yet had a lot of time to play it.

How it works

10-130	title pages
140-190	dimension arrays
200-340	set up hi-res screen
350-540	submarine movement and ship movement
540-710	depth charge drop routine
720-840	hit routine
850-920	END routine

Hints on conversion

This program isn't easy to convert as it uses high-resolution graphics. So if you don't own a Dragon or a Tandy Colour Computer, I suggest you completely rewrite lines 200-340, 360, 440, 500, 520, 600-640 and 720-820.

For the brave who attempt a conversion, here are a few points:

- GET and PUT takes a section of screen and puts it back anywhere on the screen.
- The PRINT @ command prints at any of 512 points on the screen, which is made up of a 32 by 16 display
- The Dragon doesn't require the command LET, so if your machine does you will have to insert it at the required points.
- ASCII codes 8 and 9 are the codes for the cursor keys on the Dragon
- This program takes up just over 12.5K of memory, but most of this is used by the graphics.

ZX MICROFAIR

THERE'S ROOM FOR EVERYONE AT THE BIGGEST ZX MICROFAIR OF ALL TIME!

EVERYTHING FOR THE SPECTRUM, ZX81 AND MOST POPULAR MICROS!

- BIG** Twice as big as the last show!
- BIG** Even more exhibitors and interesting new computer products!
- BIG** Plenty of space to move, eat, drink and relax!
- BIG** Biggest value from any exhibition — admission £1 (50p for kids under 14)!
- BIG** Choice of hardware, software, books, peripherals, programs — even a bring-and-buy sale!
- BIG** Exhibition hall in parkland — big space — big car park!
- BIG** Big choice of "how to get there" — rail, road, bus, tube, foot — see right!
- BIG** Big day out for all the family!
- BIG** Big savings on most manufacturers' "show offers".

Come to the big one...

7th
ZX MICROFAIR
ALEXANDRA PALACE,
SATURDAY, JUNE 4th 1983

CUT OUT AND KEEP HOW TO GET TO THE BIG SHOW.

By Road
Follow signs from the A1 (Link) with M1 and North Circular. Plenty of parking space available!
Variety of routes from Central London.

By British Rail
From London (Kings Cross or Moorgate) — about every 10 minutes to Alexandra Palace station — free shuttle bus or short walk from there!
From any part of the U.K. enquire from Kings Cross Travel Centre, London N1 9AP (phone 01-278 2477) about special day trips to the ZX MICROFAIR!

By London Transport
Underground: Victoria Line from Victoria (also Oxford Circus, Kings Cross/St Pancras) to Highbury and Islington — change (cross platform) to BR Suburban Service to Alexandra Palace — free shuttle bus or 5 minute walk from there!

Alternative: Piccadilly Line (from Heathrow etc) to Finsbury Park or Wood Green — Link with W3 bus service to the fair

HEATHROW ← Piccadilly Line

SATURDAY JUNE 4th at ALEXANDRA PAVILION, ALEXANDRA PALACE, WOOD GREEN, LONDON N22. FROM 10am to 6pm.

Advance tickets available from: Mike Johnston, 71 Park Lane, Tottenham, London N17 0HG. Adults £1.00. Kids (under 14) 50p.

Please make cheques payable to ZX MICROFAIR and enclose S.A.E.
